Cloud Reseller to End Users Portal

Overview:
Cloud computing has revolutionized the way businesses operate, and cloud resellers play a crucial role in enabling customers to access cloud resources at competitive prices. This hackathon task involves building a **Cloud Reseller to End Users Portal** that allows resellers to manage, monitor, and sell cloud services to end customers. The portal should streamline the interaction between the cloud reseller and cloud providers, automate billing, provide analytics, and enable smooth integration with cloud services offered by the provider.
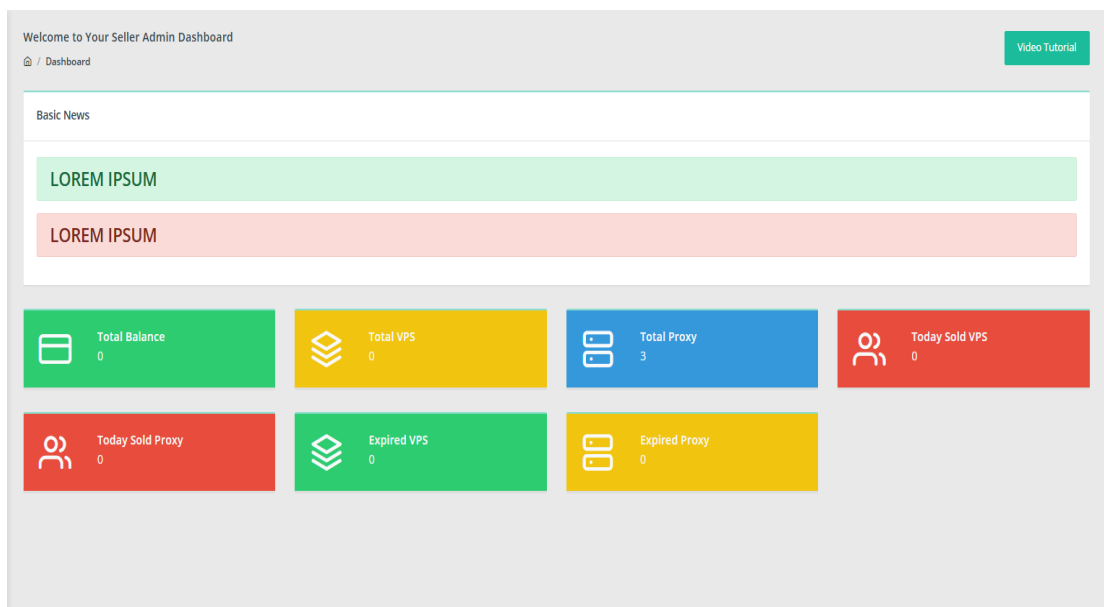

Problem Statement:
You are tasked with building a **Cloud Reseller Portal** where resellers can manage their customers, track their usage of cloud services, and interface with cloud providers for purchasing, billing, and support. This portal will act as an intermediary platform to ensure resellers can deliver cloud services to their end customers effectively.

Note:

- There is no restriction in Technologies, you can use any technologies you want
- All data are to be stored properly in database
- Bring and built some great GUI interface for user interaction
- Solution must be Scalable and Flexible
- Solution must be responsive and remotely available

Key Features Suggested to Implement:

1. Dashboard: Dashboard may contain the services of each user they are having. You can bring some visualization and more stuff to enhance user's dashboard.
